2019 – 2023

LMU München
German B1

Feb 2025 – May 2025

Professional Experience

Jun 2025 – Present	QuantCo Site Reliability Engineer / Software Engineer Munich, BY, Germany
	• Kubernetes Platform: Created a platform where teams deploy production applications in a dedicated EKS cluster. Our product dev teams got built-in Cilium CNI, ingress with Envoy, and observability with Prometheus, Alertmanager, Grafana, and Mimir. • Shared Kubernetes Cluster: Created a shared Kubernetes cluster on AWS EKS where 20+ internal teams deploy internal tools, demos for clients, and analytics workloads. • SaaS Development: Created the platform for QuantCo's first SaaS offering, an agentic claims handler running AI workloads on sensitive health data. Runs on Temporal on Kubernetes, deployed with Helm and CI/CD with GitHub Actions. Business logic is written in Python. • Multi-Cloud Environment: Set up a cloud platform managed in Terraform/OpenTofu that allows our 300+ employees to deploy resources to AWS, Azure, and GCP. Synced permissions across all clouds to use Okta groups as the source of truth. • Data Sovereignty: Ensured that all QuantCo data for our EU-based clients remain in the EU. Set up environments for EU data boundary restrictions in AWS/GCP/Azure, and worked on data protection for internal AI tools.
May 2021 – Mar 2025 Dec 2024 – Mar 2025 (SDE II)	Amazon Web Services (AWS) Backend Software Engineer II (L5) Boston, MA, USA
Aug 2023 – Nov 2024 (SDE I)	• Service Development: Built Migration Hub Automation's backend from the ground up, automating tasks such as lifting and shifting on-premises servers to EC2. Built a custom orchestration / durable workflow system to manage automation tasks. Mostly Java based, with some code also written in Python.
Jun – Aug 2022, May – Dec 2021 (SDE Intern)	• On-Call Operations: Led troubleshooting efforts, root cause analysis, and trained team members to resolve issues. Supported / fixed bugs / improved performance of services hosted on EC2, ECS, Lambda, and Step Functions, backed by DynamoDB. • Compliance & Security: Designed a microservice and database schema to comply with GDPR, ensuring safe and performant customer data deletion.

Solo Projects

May 2026 – Present	OnboardingHero OnboardingHero is a portal for companies that integrates with HR software (like HiBob or Personio) to pull employee information and make signing up for insurance in Germany painless. I am the only developer, but I work with a licensed insurance broker in Germany. Runs on Django and HTMX , non-identifying data is persisted in SQLite , each client runs in their own Docker container, and is hosted on Hetzner .
Dec 2025 – Present	24Frames Built 24frames.mov – a site for independent filmmakers to upload, rate, and review their videos. The videos are actually just Youtube embeds, but we provide a more “streaming-service-like” frontend and have a rating/review system tailored to movies. Runs on React/Deno/Supabase .
Jan 2023 – Jun 2023	Bidirectional 3D Printer Designed and built a 3D “delta”-style printer that prints outwards in two directions at once, leading to faster print times and a larger build volume. Wrote custom software to control two Arduinos synchronously and designed custom parts using OpenSCAD.
